

# Paediatric e-Learning Programme

High-quality e-learning for all healthcare professionals who work with children

- Written by a multidisciplinary team of clinical experts in the UK
- Highly engaging content, with videos, animations and questions
- Real patient case studies to test your knowledge

**The Paediatric e-Learning Programme** is designed to help healthcare professionals deliver the very best care to children and young people.

Available online, the programme is arranged into four critical areas:

- cardiology
- diabetes and endocrinology
- respiratory paediatrics
- paediatric palliative care

Each module is divided into bite-sized learning sessions. So, you can study at your own pace – fitting the learning around your busy professional life. Developed by Health Education England e-Learning for Healthcare, the programme is now available to practitioners globally.

## key features at a glance

- **A multi-professional resource**  
The programme is relevant to paediatricians, paediatric advanced nursing practitioners, general practitioners, staff in emergency departments, and community healthcare workers. It is suitable for trainees and fully qualified practitioners.
- **High-quality content**  
The content has been written by leading paediatric specialists from the UK. So, the material meets the highest quality standards.
- **Interactive and engaging**  
The content is highly engaging – with videos, images, animations and questions. There are also links to further recommended reading.
- **Practical learning**  
You can test your knowledge with questions on real patient case studies. Watch videos from clinical consultations and see whether your observations and feedback are correct.
- **Certificates of completion**  
On successful completion of each module, you can print off certificates for your training or continuing professional development records.
- **Easy online access**  
You can study online at your own pace – in work, at home or even on the move.

The *Paediatric e-Learning Programme* covers a broad range of topics – from clinical themes through to communicating with young people, discussing challenging subjects, and ethical issues.

You can select learning sessions that are relevant to your role or specialist interests. The sessions can be completed in any order and you can pause and re-start your learning whenever required.

The programme is ideal for self-paced learning, either as a refresher on key

topics, for general reference or for training purposes. It complements traditional approaches, such as face-to-face training and textbook learning.

### **Real-life patient case studies**

The content features many videos, images, animations and self-assessment exercises to help embed learning and understanding.

Case studies enable you to test your knowledge and skills using real-life patient scenarios. For example, you can read a medical history and then watch a video of a patient

consultation before answering questions on your observations. This enables you to hone your diagnostic skills and apply this learning to your everyday practice.

You can track your progress online and download or print off a certificate on successful completion of each module.

The *Paediatric e-Learning Programme* is the perfect resource to fit in with your busy professional life.
