

Dermatology training – e-dermatology

An interactive e-learning resource for dermatologists

- **Covers core aspects of dermatology** with photos, case studies and self-assessment exercises
- **Helps you to develop the skills** to diagnose, treat and manage a wide variety of skin diseases
- **Produced in the UK by the British Association of Dermatologists and Health Education England e-Learning for Healthcare**

e-dermatology provides interactive training in skin health and disease. It is principally aimed at trainee dermatologists but it is also invaluable for general practitioners, nurses and other healthcare professionals.

During the programme, you can complete 160 learning sessions on the main areas of dermatology, including skin cancer, acne, eczema and also some tropical dermatology, such as leprosy and leishmaniasis.

You can access the content 24/7 via the Internet and select topics that are most relevant to your learning needs. Most sessions take around 20 to 30 minutes to complete.

key features at a glance

- **Teaching and assessment**
The high-quality course content covers the main areas of dermatology with knowledge sessions, scenario-based exercises and self-assessment questions.
- **Real-life case histories**
You can gain experience in diagnosing and treating a variety of conditions using interactive case studies.
- **High-resolution images**
Using high-quality photographs, you can view skin diseases in all stages

of their clinical development – helping you to enhance your diagnostic skills.

- **High-quality content**
The learning content has been written by leading dermatologists, in partnership with the British Association of Dermatologists. Therefore, it meets the highest professional training standards.
- **Easy access**
e-dermatology is available online. So, you can study at your own pace and in your own time – at home, on the move or in the workplace.

In partnership with:

Improving your diagnostic skills

Using scenario-based exercises, you can review how to take a dermatological history from a patient, identify the right questions to ask and make a diagnosis

in a virtual consulting room. This creates a more realistic learning experience than studying a textbook.

High-resolution images allow you to see skin diseases in all stages of their development. So, you can gain a rounded understanding of the range of clinical presentations and enhance your diagnostic skills.

Quality assurance

Self-assessment questions enable you to test your knowledge of key concepts. There are also practice sessions that reflect the style and standards of the Specialty Certificate Examinations (SCE) developed by the Federation of Royal Colleges of Physicians of the UK. The SCE is considered a benchmark in postgraduate education and *e-dermatology* is mapped to this qualification.

e-dermatology complements traditional learning. You can use this e-learning to prepare for lectures and practical work,

which enhances the overall learning outcomes. This approach also makes the most efficient use of teaching time.

Furthermore, you and other learners have access to the same, high-quality learning materials – providing consistent training for all.

Finally, *e-dermatology* offers an interactive learning resource that you can access anywhere, at any time.

PURCHASE NOW

“ e-dermatology is an excellent resource for anyone keen to enhance their knowledge of skin disease. It has been written by clinicians so is highly relevant to clinical practice. Particular strengths for me are the quality of the images and the interactive components in each session. ”

**Ruth Murphy, President,
British Association of Dermatologists**

course modules

The e-learning sessions are clustered into discrete modules, as detailed below.

- Specialty Certificate Examinations (SCE) practice sessions
- Psoriasis
- Atopic Dermatitis
- Inflammatory Dermatoses
- Urticaria/Mastocytosis/Pruritus
- Systemic Diseases
- Pigmentary Disorders
- Bullous Disorders
- Hair and Nail Disorders
- Sebaceous and Sweat Gland Disorders
- Drug Eruptions
- Oral Medicine
- Dermatopathology
- Contact Dermatitis
- Paediatric Dermatology
- Genetics
- Dermatological Surgery
- Photodermatology
- Genito-urinary Medicine
- Genital Disorders
- Skin Infections
- Benign Skin Tumours
- Melanoma
- Non-melanoma Skin Cancer
- Topical Therapy
- Psychodermatology
- Wound Care
