The Image Interpretation programme helps you to develop critical interpretation skills for a wide range of clinical examinations. Specifically, it equips you with the knowledge and skills to:

- distinguish accurately between normal examinations and those manifesting trauma or pathological conditions
- provide high-quality reports or comments on imaging examinations for referring clinicians

Whether you work as a radiographer, ultrasonographer, nurse or allied healthcare professional, this programme provides an invaluable training resource.

**key features at a glance**

- **Structured training**
  The e-learning package follows a structured format with more than 400 interactive sessions that cover the key aspects of image interpretation.

- **Peer-reviewed content**
  The clinical content has been written and peer-reviewed by leading experts in their fields. It is continually updated and expanded to reflect new clinical developments and best practice.

- **Improving patient outcomes**
  There is a practical focus on enhancing your interpretation skills – helping to minimise errors and improve patient outcomes.

- **Real-life cases**
  With real patient case studies, you can gain experience using authentic clinical scenarios and apply this learning to everyday practice.

- **Quality assurance**
  Image Interpretation is formally endorsed for continuing professional development (CPD) by the College of Radiographers. So, it meets recognised UK standards for professional training in this area.

- **Proven results**
  One study showed that this e-learning tool improved medical students’ chest X-ray interpretation skills by 50 per cent¹.

¹ Tamaklo E. Can e-learning improve medical students’ ability to interpret chest X-rays in comparison with electronic text? Poster, Association for the Study of Medical Education, 2012
The e-learning sessions are clustered into discrete modules. New modules are being added on a regular basis. Take a look at some sample sessions on our website.

The current syllabus includes:
- Radiography
- Cross-sectional (CT)
- Magnetic Resonance Imaging (MRI)
- Ultrasound
- Breast Imaging
- Technology
- Forensics
- Nuclear Medicine

The full syllabus is available to view on our website.

- Gastro-intestinal and Genito-urinary (GI and GU)
- Cardiac Imaging
- Neurointervention
- Dental and Maxillo-facial Radiography
- Orthopaedic Imaging
- Nasogastric Tube Placement
- Accessory Projections
- Osteoporosis and Fragility Fractures

Flexible learning
The clinical content has been written by senior practitioners and academics in the field. You can select individual learning sessions most relevant to your training needs. Bespoke courses and customised learning paths can also be created at an additional cost if you wish to purchase a large number of licences (e.g. for a healthcare organisation).

Learners across the globe
You can track your progress and print off or download certificates as evidence for your continuing professional development (CPD) portfolio and re-registration. The Image Interpretation programme is formally endorsed for CPD by the UK College of Radiographers.

With this e-learning, you and your colleagues can train whenever and wherever you wish using the same high-quality resources. This offers real benefits as it is often impractical for busy healthcare teams to train together in a group setting.

Image Interpretation is already used in 20 countries worldwide – testament to the high quality of the e-learning.

P R O C H I S T O R N A W

The Image Interpretation project is a fantastic resource for radiographers’ continuing professional development.

Dr Nick Woznitza, Consultant Radiographer at Homerton University Hospital, UK
